OBSERVE PRECAUTIONS
FOR HANDLING
ELECTROSTATIC/
DAMAGE SENSITIVE
DEVICES

注意：操作时应注意静电敏感
释放设备装置

Applications (应用)

? Optical indication (光学指示)

? Indoor display (室内显示)

? Automotive lighting (汽车照明)

? Backlight, converter, switch and indicator, display (LCD背光、转换器, 开关和标志, 显示器等)

? T&#a# li-. applica i!" (用于日光灯管)

? General use (一般应用)

Package Dimensions (封装尺寸)

Recommended Soldering Pattern

(建议焊盘尺寸图)

Notes: (备注)

1. All dimensions are in millimeters (所有标注尺寸单位为毫米)

2. All dimensions are in millimeters (除特别标注外, 所有尺寸允许公差±0.15mm)

Selection Guide (选择指南)

SM⁴ Reflow Soldering Instructions SM⁴ 回流焊说明

1. Reflow soldering cannot be performed more than twice.

2. When soldering, do not apply pressure to the adhesive surface of the material while it is heated.

Soldering iron 烙铁焊接

1. When using a soldering iron, the temperature must be less than 300°C and the time must not exceed 3 seconds.

2. Hand soldering can only be performed once.

Repairing 修补

Repairing LED components should be avoided. If repair is unavoidable, it must be done using a double-lead soldering iron (as shown in the diagram below), but it is essential to first confirm that the repair method will not damage the LED's characteristics.

LED reflow soldering should not be repaired. When repair is unavoidable, it must be done using a double-lead soldering iron (as shown in the diagram below), but it is essential to first confirm that the repair method will not damage the LED's characteristics.

Precautions 注意事项

The LED encapsulation is made of silicone, so the LED adhesive surface is soft. Applying pressure to the adhesive surface will affect the LED's reliability. Therefore, preventive measures should be taken to avoid applying strong pressure to the components during repair. When using a vacuum nozzle, the pressure on the adhesive surface should be appropriate.

Therefore, preventive measures should be taken to avoid applying strong pressure to the components during repair. When using a vacuum nozzle, the pressure on the adhesive surface should be appropriate.

LED工作环境及与LED适配的材料中硫元素及化合物成份不可超 100PPM

LED工作环境及与LED适配的材料中硫元素及化合物成份不可超 100PPM

当我们需 用外封胶涂抹LED产品时，应确保外封胶与LED封 胶水相匹配，因为大多数LED的封 胶水为硅胶，它有较 强的氧化性和较强的吸湿性，必须防止外封材质进入LED内部以 成LED的损伤，单一的溴元素含量要求小于900PPM，单 一氯元素含量要求小于900PPM，在涂抹LED产品时要求外封胶溴元素与氯元素总含量必须小于1500PPM
